# Package 'fastlogranktest'

April 3, 2020

Type Package
<b>Title</b> A Fast Way to Calculate the p-Value of One or Multiple Log-Rank-Tests
Version 0.2
<b>Author</b> Andreas Stelzer, Manuela Lautizi, Tim Kacprowski, Research group of Computational Systems Medicine, Chair of Experimental Bioinformatics, TU Munich
Maintainer Tim Kacprowski <tim.kacprowski@wzw.tum.de></tim.kacprowski@wzw.tum.de>
<b>Description</b> A very fast Log-Rank-Test implementation that is several orders of magnitude faster than the implementation in the 'survival' package.  Log-Rank-Tests can be computed individually or concurrently using threading.
License GPL-3
<pre>URL https://github.com/compsysmed/fastlogranktest.git</pre>
Encoding UTF-8
LazyData true
RoxygenNote 7.0.2
LinkingTo Rcpp, BH
Imports Rcpp
Suggests testthat (>= 2.1.0), survival (>= 3.1)
NeedsCompilation yes
R topics documented:

Index

2 multi\_logrank\_test

logrank\_test

Calculate the Log-Rank-Test very fast

### **Description**

Calculate the Log-Rank-Test very fast

#### Usage

```
logrank_test(groupa, groupb, groupacensored, groupbcensored, onlyz = FALSE)
```

#### **Arguments**

```
groupa vector of group a's survival times
groupb vector of group b's survival times
groupacensored vector of censored information of group a's survival times
groupbcensored vector of censored information of group b's survival times
onlyz (optional) calculate only z-statistic
```

#### Value

chi2 statistic, z-statistic, p-value

#### **Examples**

multi\_logrank\_test

Calculate multiple Log-Rank-Tests very fast

#### **Description**

Calculate multiple Log-Rank-Tests very fast

multi\_logrank\_test 3

#### Usage

```
multi_logrank_test(
   groupas,
   groupbs,
   groupacensoreds,
   groupbcensoreds,
   threadnumber = NULL,
   onlyz = FALSE
)
```

#### **Arguments**

groupas list of vectors of groupa's survival times
groupbs list of vectors of groupb's survival times
groupacensoreds
list of vectors of censored information of groupa's survival times
groupbcensoreds
list of vectors of censored information of groupb's survival times
threadnumber (optional) set the number of threads used for this function
onlyz (optional) calculate only z-statistic

#### Value

vector of chi2 statistic, z-statistic, p-value (same order as input)

## **Examples**

# **Index**
